

Watering instructions for NEW PLANTS:

Watering is key to having your new plants look their best. We have applied fertilizer and everything needed for your plants. But the right amount of water the key to getting the most out of your investment in a new landscape.

Please soak the root balls each day for the first three days. After those first three days, please water every third day for the next 12 days. That's 4 more watering over the next 2 weeks. We want to soak the root balls, but then give them an opportunity to dry out between waterings. If you see that the plants are sitting in water, then watering every 4 or 5 days may be needed. If an open end hose is used, usually 4-5 minutes on a root ball is plenty of water. If using a sprinkler, usually about 40-50 minutes will soak the root balls.

After the 2 week period, for the rest of the season you want to make sure that the root balls get soaked twice each week depending on the amount of sun, heat and how the plants look. Let the roots dry out between waterings. But when you water, make sure the roots are completely soaked. Remember that mulch soaks up water, so use enough water to get to the roots.

Please, always feel free to call us and we will be happy to discuss any problems or concerns that you may have concerning your property.

Enjoy your new landscape!
