

Watering instructions for NEW SOD:

Watering is key to having your new sod look its best. We have applied fertilizer and everything needed for your sod. But the right amount of water the key to getting the most out of your investment in a new landscape.

Please soak the sod each morning and evening each day for the first 5 days.

After those first five days, please water every third day for the next 12 days. That's 4 more watering over the next 2 weeks. We want to soak the roots to make it very muddy under the grass so that it binds to the dirt, but then give it an opportunity to dry out between waterings. If you see that the sod is sitting in water, then watering every 4 or 5 days may be needed. We suggest using a sprinkler, usually about 40-50 minutes will soak the roots.

After the 12 day period, for the rest of the season you want to make sure that the roots get soaked twice each week depending on the amount of sun, heat and how the sod looks.

After it is established, soak the sod roots 2 to 3 inches down twice each week. Let the roots dry out between waterings. But when you water, make sure the grass roots are completely soaked. This will cause the roots to "chase" the water down deep, whereas light daily watering will help the roots to "rise" to the water and will help produce shallow roots that are more susceptible to burning in the summer sun.

Always feel free to call us to discuss any problems or concerns that you may have concerning your property.

Enjoy your new landscape!
